Shilajit Packaging Calculator

Packaging Prices, Quantity Slabs, Estimated Weights and Multi-Currency Support

Base currency: Pakistani Rupee (PKR)

All packaging prices are per piece. All weights are estimated per piece and should be verified against physical samples.

1. Spoon Packaging

Spoon 1: Hook Spoon Silver

Order Quantity	Price per Piece	Estimated Weight
100–200 pcs	Rs 50	5–8 g
201–1,000 pcs	Rs 40	5–8 g
1,001–5,000 pcs	Rs 30	5–8 g

Spoon 2: Golden Hook Spoon

Order Quantity	Price per Piece	Estimated Weight
100–200 pcs	Rs 70	5–8 g
201–1,000 pcs	Rs 60	5–8 g
1,001–5,000 pcs	Rs 55	5–8 g

Spoon 3: Black Plasma Hook Spoon

Order Quantity	Price per Piece	Estimated Weight
100–200 pcs	Rs 90	5–8 g
201–1,000 pcs	Rs 85	5–8 g
1,001–5,000 pcs	Rs 70	5–8 g

Spoon 4: Stick Spoon, 2-Piece

Order Quantity	Price per Piece	Estimated Weight
100–200 pcs	Rs 100	8–12 g
201–1,000 pcs	Rs 90	8–12 g
1,001–5,000 pcs	Rs 80	8–12 g

Spoon 5: Stick Spoon, 2-Piece Premium

Order Quantity	Price per Piece	Estimated Weight
100–200 pcs	Rs 130	10–15 g
201–1,000 pcs	Rs 125	10–15 g

Order Quantity	Price per Piece	Estimated Weight
1,001–5,000 pcs	Rs 120	10–15 g

2. Bleached-Card Box

Material: 350 GSM bleached card

Estimated weight: 10–15 g per box

Order Quantity	Price per Box	Estimated Weight per Box
200 pcs	Rs 90	10–15 g
201–500 pcs	Rs 70	10–15 g
501–1,000 pcs	Rs 50	10–15 g
1,001–5,000 pcs	Rs 40	10–15 g

3. Tube Packaging

Estimated weight: 40–70 g per tube

Order Quantity	Price per Tube	Estimated Weight per Tube
200 pcs	Rs 350	40–70 g
201–500 pcs	Rs 310	40–70 g
501–1,000 pcs	Rs 250	40–70 g
1,001–5,000 pcs	Rs 200	40–70 g

4. Rigid Box

Estimated weight: 80–140 g per box

Order Quantity	Price per Box	Estimated Weight per Box
100–200 pcs	Rs 380	80–140 g
201–500 pcs	Rs 320	80–140 g
501–1,000 pcs	Rs 250	80–140 g
1,001–5,000 pcs	Rs 200	80–140 g

5. Calculator Functionality

5.1 Packaging Selection

Customers must be able to select from the following packaging options:

1. Hook Spoon Silver
2. Golden Hook Spoon
3. Black Plasma Hook Spoon
4. Stick Spoon, 2-Piece

5. Stick Spoon, 2-Piece Premium
6. Bleached-Card Box
7. Tube Packaging
8. Rigid Box

Each option must display the available quantity slabs, applicable per-piece price, and estimated weight.

5.2 Automatic Price Calculation

The calculator must automatically apply the appropriate price based on the selected packaging type and order quantity.

Formula:

Total Packaging Cost = Quantity × Price per Piece

Example:

For 300 Hook Spoon Silver pieces, the applicable price is Rs 40 per piece.

Total cost = 300 × Rs 40 = Rs 12,000.

5.3 Estimated Weight Calculation

The calculator must calculate the estimated total packaging weight using the selected quantity and the estimated weight range per piece.

Formulas:

Minimum Estimated Weight = Quantity × Minimum Weight per Piece

Maximum Estimated Weight = Quantity × Maximum Weight per Piece

Example:

For 300 rigid boxes weighing approximately 80–140 g each:

- Minimum estimated weight: 24 kg
- Maximum estimated weight: 42 kg

The displayed packaging weight must exclude the Shilajit product, jars, labels, inserts, and other components unless they are separately included in the calculation.

5.4 Minimum Order Quantities

The calculator must validate quantities according to the following minimums:

Packaging Type	Minimum Order Quantity
All five spoon types	100 pcs
Bleached-Card Box	200 pcs

Packaging Type	Minimum Order Quantity
Tube Packaging	200 pcs
Rigid Box	100 pcs

Orders below the listed minimum quantities must not automatically receive a standard price. Customers can be directed to request a custom quotation.

5.5 Quantity-Based Pricing

The calculator must automatically apply the correct pricing tier for each packaging type.

- Spoons: three pricing tiers, from 100 to 5,000 pieces.
- Bleached-card boxes: four pricing tiers, from 200 to 5,000 pieces.
- Tube packaging: four pricing tiers, from 200 to 5,000 pieces.
- Rigid boxes: four pricing tiers, from 100 to 5,000 pieces.

For quantities exceeding 5,000 pieces, the system should use an additional admin-configurable pricing tier or offer a custom quotation.

The calculator must validate all quantity boundaries accurately.

6. Multi-Currency Pricing and Automatic Conversion

6.1 Base Currency

Pakistani Rupee (PKR) will be the default base currency for all packaging prices and calculations.

All original packaging prices must be entered and maintained in PKR through the admin panel. Foreign currency prices will be calculated from these base prices.

6.2 Customer Currency Selector

Customers must be able to select their preferred currency through a dropdown menu.

Supported currencies:

Currency	Code	Symbol
Pakistani Rupee	PKR	Rs
US Dollar	USD	$
British Pound Sterling	GBP	£
Euro	EUR	€

PKR will be selected by default. Customers can switch to USD, GBP, or EUR at any time.

6.3 Automatic Currency Conversion

When a customer changes the currency, all applicable prices must automatically update without requiring a page refresh or manual calculation.

The selected currency must apply consistently to:

- Per-piece packaging prices
- Quantity-based pricing tiers
- Total packaging costs
- Complete packaging combinations
- Additional charges included in the calculator

Estimated weights must remain displayed in grams or kilograms regardless of the selected currency.

6.4 Exchange Rate Management

The website should support both automatic exchange rates and manual admin overrides.

Automatic exchange rates: The website retrieves current exchange rates from a reliable currency exchange rate API.

Manual exchange rates: The administrator can enter or override exchange rates for USD, GBP, and EUR against PKR through the admin panel.

The system should display the exchange rate source and last update time where available. If automatic exchange rates become unavailable, the website should use the last valid rate or an admin-configured fallback rate, with a clear indication that the rate may be outdated.

6.5 Currency Conversion Formula

The calculator must first calculate the packaging cost in PKR and then convert the total into the selected currency.

Formula:

Converted Price = Base PKR Price ÷ PKR Exchange Rate per Unit of Foreign Currency

Example:

If USD 1 equals PKR 280 and the packaging cost is PKR 28,000:

Converted price = Rs 28,000 ÷ 280 = USD 100.

The exchange rate is illustrative only and must not be treated as a live market rate.

6.6 Currency Display Requirements

The calculator should display:

- Selected currency and symbol
- Per-piece price in the selected currency
- Total packaging cost in the selected currency
- Applicable exchange rate
- Exchange rate's last update time, where available

Prices must be rounded appropriately for the selected currency.

Currency selection should update all displayed prices consistently throughout the calculator.

6.7 Important Currency Considerations

Converted prices are estimates unless the business explicitly guarantees a fixed price in the selected currency.

The final invoiced amount may differ because of exchange rate fluctuations, payment provider conversion rates, bank fees, taxes, or international transaction charges.

7. Admin Panel Price and Specification Management

All packaging prices, quantity-based pricing tiers, and currency settings must be manageable through the website's admin panel.

The administrator must be able to:

1. Add new packaging types.
2. Edit existing packaging prices.
3. Change minimum and maximum quantities for pricing tiers.
4. Add, remove, or modify quantity-based pricing tiers.
5. Update estimated weight ranges.
6. Update packaging specifications, including materials and GSM.
7. Configure minimum order quantities.
8. Set prices for quantities exceeding the currently listed slabs.
9. Enable or disable supported currencies.
10. Configure automatic or manual exchange rate management.
11. Set manual exchange rate overrides.
12. View current exchange rates and their last update times.
13. Configure price rounding and currency display preferences.

Dynamic Price Updates

The calculator must retrieve its prices and applicable quantity slabs from admin-managed data rather than hardcoding them into the website.

Changing a packaging price in PKR must automatically update the displayed prices in every supported currency.

Updating an exchange rate must recalculate all converted prices without requiring individual changes to each packaging price.

The administrator must be able to maintain pricing and specifications independently after development is complete, without requiring code modifications.

8. Future Expansion

The calculator should be designed to accommodate additional packaging components and services, including:

- Jars of different sizes
- Labels and printing
- Brochures and inserts
- Packaging spoons and accessories
- Printing setup charges
- Custom branding
- Shipping and handling
- Complete packaging combinations

These additions should be configurable through the admin panel wherever applicable.

The system should allow customers to calculate the total cost of a selected packaging combination, with the applicable quantity-based rates and selected currency applied consistently.

9. General Notes and Requirements

1. All base packaging prices are maintained in PKR and may be changed through the admin panel.
2. Foreign currency prices are calculated using the applicable exchange rate.
3. All weights are estimates and may vary according to final packaging specifications.
4. Packaging prices are per piece, not per order, unless explicitly configured otherwise.
5. Packaging-only costs must be distinguished from the cost of Shilajit and other product components.
6. The calculator must clearly display the selected quantity, applicable per-piece price, total packaging cost, and estimated total packaging weight.
7. Quantity boundaries must be validated correctly so every supported quantity maps to the appropriate pricing tier.
8. Currency conversion must work consistently across all packaging options and quantity slabs.
9. The admin panel must provide independent control over packaging prices, quantity slabs, weights, specifications, and currency settings.
10. The website developer must ensure that future price updates can be completed without modifying the calculator's code.
